Genes with similarity to proteins in the databases are described in
'product' or 'note' qualifiers. Genes that have no significant
protein similarity are described as 'unknown protein'.
The software programs used to predict genes include: Grail
(Informatics Group, Oak Ridge National Laboratory,
http://compbio.ornl.gov/Grail-1.3/),
MetGene2 (S.M. Hebsgaard, et al., CBS, Technical University of
Denmark, http://www.cbs.dtu.dk/services/NetGene2/) and
splicePredictor (Volker Brendel, Stanford University,
http://gremlinl.zool.iastate.edu/ggi-bin/sp.cgi).
Genes encoding tRNAs are predicted by tRNAscan-SE
(Sean Eddy, washington University School of Medicine, St. Louis,
http://genome.wustl.edu/eddy/tRNAscan-SE).
This sequence may not be the entire insert of this clone. It may be
shorter because we remove overlaps between neighboring submissions.

------ Summary Statistics
Sequencing vector: Plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
Consensus quality: 169312 bases at least 040
Consensus quality: 170102 bases at least 030
Consensus quality: 170295 bases at least 020
Consensus quality: 170295 bases at least 020 Insert size: 163000; agarose-fp
Insert size: 170365; sum-of-contigs
Quality coverage: 17.6 in Q20 bases; agarose-fp
Quality coverage: 16.8 in Q20 bases; sum-of-contigs

NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations where differences are found these are annotated as variations wariation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality = 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep Repeat names beginning 'Dr' were identified by Rick Waterman (Stephen Johnson lab, WashU). Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Direct Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are esequenced and submitted once, so the sequence for the remainder the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        of Molecular and Human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  where differences are found these are annotated as variations where differences are found these are annotated as variations where differences are found these are annotated as variations where with a note of the overlapping clone name. Note that the together with a note of the overlapping clone, as we submit sequences with corresponding to the overlapping clone, as we submit sequences with rished above.

Only a small overlap as described above.

Only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate regions were either double-stranded or sequencing problems, such 30); an attempt was made to resolve all sequencing problems, such 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least as compressions and repeats; all regions were covered by at least as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Mil subclone; and the rare assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: numbers given in the feature table with their source databases: numbers given in the feature table with their source databases: numbers given in the feature table with their source databases: numbers given in the feature table with their source databases: numbers given in the feature table with their source databases: numbers given in the feature table with their source databases: numbers given beginning 'dar' (Zhirong Bao and Sean Eddy, submitted), and those beginning 'dar' were identified by Rick Waterman (Stephen Johnson lab, Washu). For were identified by Rick Waterman (Stephen Johnson lab, washu).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Local Similarity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3141 TTAGTATTTTGTTTTTTTTTGGT 3163
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Direct Submission

All repeats were identified using RepeatMasker: html http://ftp.genome.washington.edu/RM/RepeatMasker.html http://ftp.genome.washington.edu/RM/RepeatMasker.html http://ftp.genome.center
Center clone name: 547 K 2

------ Summary Statistics
Sequencing vector: M13; M77815; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.960731
Assembly guality: 158029 bases at least Q40
Consensus quality: 168695 bases at least Q20
Consensus quality: 173285 bases at least Q20
Consensus quality: 173285 bases at least Q20

NOTE: This is a 'working draft' sequence. It currently consists of 37 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Insert size: 177325; sum-of-contigs

The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to viruses.

Overexpression of SGS3 results in plants with increased resistance to Overexpression of SGS3 results in plants with increased resistance to Viruses, while inactivation of SGS3 in transgenic plants (e.g. by viruses, while inactivation of SGS3 in transgenic plants (e.g. by increases the level of the transgene product. This product may e.g. increases the level of the transgene product. This product may e.g. inspart resistance (to herbicide, insects or pathogens), alter contents of essential fatty acids or proteins, or is pharmaceutically active, e.g. a immunoclability or interference.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New SGS3 gene from Arabidopsis thaliana, useful for increasing virus resistance in plants and, when inhibited, for increasing transgene

The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to viruses. Overexpression of SGS3 results in plants with increased resistance to viruses, while sinactivation of SGS3 in transgenic plants (e.g. by expressing antisense inactivation of SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous recombination) increases the level of the transgene product. This product may e.g. impart resistance (to the transgene product. This product may e.g. impart of essential fatty acids herbicide, insects or pathogens), alter contents of essential fatty acids or proteins, or is pharmaceutically active, e.g. an immunoglobulin or interface.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1878

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Arabidopsis thaliana
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PCR primer
                                                                                                                                                                                                   PCR primers AAF25371-72 were used to amplify cDNA encoding an Arabidopsis thaliana SGS3 polypeptide. The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to transcriptions of SGS3 results in plants with increased viruses. Overexpression of SGS3 results in plants with increased resistance to viruses, while inactivation of SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous (e.g. by expressing antisense RNA, by mutation or by homologous recombination) increases the level of the transgene product. This product recombination) increases the level of the transgene product. This contents of essential fatty acids or proteins, or is pharmaceutically contents of essential fatty acids or proteins, or is pharmaceutically active, e.g. an immunoglobulin or interferon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New SGS3 gene from Arabidopsis thaliana, useful for increasing virus resistance in plants and, when inhibited, for increasing transgene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (AVET )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  16-JUL-1999; 99FR-00009417.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PCR primers AAF25371-72 were used to amplify cDNA encoding an Arabidopsis thaliana SGS3 polypeptide. The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to viruses. Overexpression of SGS3 results in plants with increased resistance to viruses, while inactivation of SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous recombination) increases the level of the transgene product. This product may e.g. impart resistance (to herbicide, insects or pathogens), alter contents of essential fatty acids or proteins, or is pharmaceutically active, e.g. an immunoglobulin or interferon

The invention relates to a nucleic acid comprising a sequence at least 18 CC bases in length of a segment of the chemically pretreated DNA of genes CC associated with pharmacogenomics according to one of the sequences of the CC genes ALDH6 (NM 000693), CYP11A (NM 000781), CYP11B1 (NM 000979), CCLN (NM 000776 and NM 017460), DPYD (NM 000110), EPHX2 (NM 001979), CCLN (CC (NM 01990), NM 019901, NM 019902, NM 019902, NM 019982, NM 019988, NM 019899) and CC their complementary sequences, or a sequence (S1) chosen from 87 CC sequences and their complements. The chemical pretreatment is bisulphite treatment to convert cytosines (but not methyl-cytosines) into uracils. Also included are an oligomer (II) in particular an oligonucleotide or a CC peptide nucleic acid (PNA)-oligomer, comprising in each case at least one base sequence having a length of 9 nucleotides which hybridises to or is identical to a chemically pretreated DNA of genes associated with CC pharmacogenomics and their complements, arranged in an array for canalysing diseases associated with the methylation state (CpG) and/or detecting SNPs (single nucleotide polymorphisms) of the 87 sequences. The coligomers may also be used as PCR princers. The set of 87 nucleic acids and their complement. Nuclei The set of 87 nucleic acids cand their complement is useful for diagnosis and therapy of solid cont form part of the princed specification, but was obtained in CC electronic format directly from MIPO at CC electronic format directly from MIPO at CC electronic format directly from MIPO at two controls and the control of the set of the sequences.

                                                                                                                                                                                                                                                                                                                                                                                 CC sequences (ABN7996-ABN80333) or their complements. The invention is sequences (ABN7996-ABN80333) or their complements. The invention is CC useful for the diagnosis or therapy of diseases associated with congenity of the diseases related to homeobox containing CC development genes, in particular disease related to homeobox containing CC genes (HOX), like diabetes, cancer, apoptosis related diseases, syndromes CC associated with congenital heart disease, epilepsy, diseases related to histone deacetylation, Currarino syndrome, diseases related with the CC histone deacetylation, Currarino syndrome, diseases related with the CC disjomers specific to each of the genes are useful for detecting the CC (II) and their complementary sequences, as primer oligonuclectides for the amplification of the 350 sequences, (II) and/or their complements and CC the amplification of the 350 sequences, (II) and/or their complements and constant probes for detecting the cytosine methylation state and/or their sequences for detecting the cytosine methylation state and/or patent did not form part of the printed specification but is based on constant of the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               acute myeloid leukaemia; Alzheimer's disease; AIDS; neurofibromatosis; rheumatoid arthritis; psoriasis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  03-JAN-2002

The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AlDS, epilepsy, neurofibromatosis, rheumatorid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                       The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with bisulphite, of genes associated with tumour suppression and oncogenes having a sequence taken from 536 (actually 533 since numbers 408, 458 are missing from the sequence listing) sequences (Ss) and sequences 500 are missing from the sequence listing) sequences (Ss) and sequences
                                                                                                                                                                                                                                                                                                  Fragments of chemically modified genes associated with tumor suppressor genes and oncogenes, useful in designing primers and probes for analyzin diseases associated with cytosine methylation state e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 15-MAR-2000; 2000DE-01013847

The CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The CC probes can also be used in a method for ascertaining genetic and/or CC epigenetic parameters for the diagnosis and/or therapy of existing CC diseases or the predisposition to specific diseases, by analysing CC eytosine methylations. The parameters may be compared to another set of CC genetic and/or epigenetic parameters may be compared to another set of CC for diagnosis and/or prognosis events which are disadvantageous to CC for diagnosis and/or prognosis events which are disadvantageous to CC mumbers and the present sequence is one of the 533 genomic sequences CC numbered Seq ID numbers are the complementary sequence of the CC corresponding odd numbers are the complementary sequence of the S35, except for those whose partner sequence is missing). Note: The CC sequence date for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fig. wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                  WO200200927-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo sapiens
                                                                                                                                                                                                                                                                                                       30-JUN-2000;
01-SEP-2000;
The invention relates to a nucleic acid (I) comprising a sequence a least 18 bases in length of a segment of chemically pretreated DNA of genes associated with development selected from 87 genes listed specification such as ACCDN, ADFN, or AFD1 and comprising one of 35 sequences (ABN79984-ABN80333) or their complements. The invention is
                                                                                                                                                                                                                                          Olek A,
                                                                                                                                                                                                                                                                                                                                                       02-JUL-2001; 2001WO-EP007536.
                                                                                                                                           Novel nucleic acid useful for diagnosis and therapy of diseases associated with development genes such as diabetes, comprises a sequence of a segment of chemically pretreated DNA of genes associated with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC development genes, in particular disease related to homeobox containing CC development genes, in particular disease related to homeobox containing CC genes (HOX), like diabetes, cancer, apoptosis related diseases, syndromes CC genes (HOX), like diabetes, cancer, apoptosis related diseases, epideps, diseases related to CC associated with congenital heart disease, epilepsy, diseases related to CC histone deacetylation, Currarino syndrome, diseases related with the CC disponent of the brain and limb girdle muscular dystrophy and dwarfism. CC coligomers specific to each of the genes are useful for detecting the CC oligomer specific to each of the genes are useful for detecting the CC injunction state of all CpG dinuclectides within the 350 sequences or CC (II) and their complementary sequences, as primer oligonuclectides for the amplification of the 350 sequences, (II) and/or their complements and CC as oligomer probes for detecting the cytosine methylation state and/or CC single nuclectide polymorphisms (SNPs). Note: The sequence data for this case of the printed specification but is based on patent did not form part of the printed specification but is based on CC sequence information supplied to Derwent by the European Patent Office

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ADA02738;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ADA02738
The invention relates to recombinant carcinoma associated (CA) nucleic acid sequences from mouse and human (ADA01482-ADA03094), and to recombinant carcinoma associated proteins (CAP) encoded by them. The invention also encompasses expression vectors and host cells comprising a invention also encompasses expression vectors and host cells comprising CA nucleic acid, a polypeptide (especially an antibody) that specifically binds to the protein, and a biochip comprising CA nucleic acid or binds to the protein, and a biochip comprising CA nucleic acid or oncogenic retroviruses, which insert into the genome of the host organism oncogenic retroviruses, which insert into the genome of the host organism oncogenic retrans-acting viral genes, meaning that cancer incidence is a pathogenic trans-acting viral genes, meaning that cancer incidence is a pathogenic retrans-acting viral genes, meaning that cancer incidence is a pathogenic retrans-acting viral genes, meaning that cancer incidence is a pathogenic retrans-acting viral genes, meaning that cancer incidence is a pathogenic retrans-acting viral genes, meaning that cancer incidence is a pathogenic retrans-acting viral genes, meaning that cancer incidence is a pathogenic retrans-acting viral genes, meaning that cancer incidence is a pathogenic retrans-acting viral genes, meaning that cancer incidence is a pathogenic retrans-acting viral genes, meaning that cancer incidence is a pathogenic retrans-acting viral genes, meaning that cancer incidence is a pathogenic retrans-acting viral genes, meaning that cancer incidence is a pathogenic retrans-acting viral genes, meaning that cancer incidence is a pathogenic viral genes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               26-DEC-2001; 2001US-00035832.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         26-DEC-2002; 2002WO-US041414.
